ABOUT ME

I'm a web developer from Woking, Surrey. I've been coding since 2016, primarily working with front-end technologies but with some back-end experience too. Aside from standard HTML and CSS, I mostly use Javascript and related tools - including React, Node, Webpack, Express, Vue and jQuery. I initially started out with Wordpress, so I'm very familiar with that too.

I've previously worked at a digital marketing agency in Guildford as the senior member of a small web team, and have since continued expanding my skillset through personal projects and educational courses.
